

ABSTRACT

1
2 A nozzle for delivering a measured quantity of viscous liquid including a flared
3 opening defined by a horizontal perimeter and a flare wall extending inward from the
4 perimeter, a cylindrically-shaped barrel wall extending from the flare wall downward
5 to a break point defined by a circle parallel to the flare opening and spaced-apart
6 therefrom, a cone-shaped wall extending downward from the circular break point and
7 inward therefrom to a circular exit opening, and a small-diameter exit tube extending
8 from the circular exit opening to a circular exit aperture.
